

Routing for VFR departures from Egelsbach with subsequent change of flight rules to IFR in the Frankfurt local traffic area.

In order to enable an early start of the IFR leg for VFR departures from Egelsbach with subsequent change of flight rules to IFR in the Frankfurt local traffic area and to ensure the print of an operationally appropriate control strip for these flights, the following procedure must be followed when the flight plan is filed.

The actual routing may deviate from the route filed in the flight plan. The following VORs, waypoints or ATS routes are to be entered in field 15 of the flight plan: (Note: Deviations may result in the responsible DEP control not having an FPL - the FPL may then have to be completely relinquished).
